

SUMMARY

Design engineer with five years across marketing, UX, and enterprise data. I led design for a mobile banking app, building its design system by hand, and I now build what I design: front-end, audio tools, and applied AI. Looking for a product team working in audio, transcription, or AI.

SELECTED BUILDS

AI mastering agent · Python, pedalboard, FabFilter, FastAPI, TypeScript, React, Astro2026 – Present

- › Built an agent that takes a finished mix through its final loudness and tone pass, rendering candidate masters with FabFilter plugins and keeping state across a multi-step run.
- › It renders every candidate to the same integrated loudness (ITU-R BS.1770, true-peak limited), compares them blind, and composes the final master from the strongest takes.
- › Built an active-learning model of my own taste and shelved it when blind results showed it had learned the bias in my unblinded ratings, the known reward-model overoptimization failure.
- › The untouched original won 26 of 58 blind, loudness-matched votes (one rater, me, June to August 2026), so I moved the rigor into the test, which now gates every change.

uxjon.com/case-studies/the-console

Audio catalog and search · Python, Whisper, librosa, Claude2026 – Present

- › Built a searchable catalog of roughly 20,000 audio files as its sole engineer; a Whisper, librosa, and Claude pipeline transcribes speech, fingerprints, deduplicates, and classifies each file by its content.

Browser instrument · Web Audio API2026 – Present

- › Built a playable instrument that runs in a browser tab, with Web Audio synthesis, sequencing, and a performance layer; the sound engine and the interface were designed as one system.

EXPERIENCE

CHS Inc. · Business Analyst, AI & BI EngineeringAug 2023 – Present

- › Designed the self-serve onboarding surface for the company's internal AI platform, embedded with engineering, from a 250-person beta toward company-wide rollout; other teams are adopting it as a design system.
- › Built a Python tool that reads the dbt manifest and writes each model's lineage (which tables feed which) to Excel, Power BI, and stakeholder briefs in one pass.
- › Used AI to find which data models lacked semantic context and worked with developers to add it in Alation, so engineers and other teams understand the models the same way.
- › Coordinate releases for the go-to-market data engineering team at a Fortune 500 agricultural cooperative; its AI and BI products serve thousands of employees and the cooperative's farmers and growers.

Raylu, Inc. · Product Designer (Freelance)Jan – Oct 2023

- › Designed the brand, Figma components, and prototypes for an AI chat platform; the founders carried them into meetings that closed a \$4M seed and engineering built from the same file.

Crediverso · UX Design LeadFeb 2021 – Jan 2023

- › Designed the primitives, patterns, and onboarding flows for a bilingual banking app for US Hispanic households.
- › Ran usability testing with 50+ participants; the iterated primary flow cut bounce from 40% to 25%.
- › Grew the pre-launch channel from 700 to 2,100 followers on A/B-tested messaging before the App Store launch.

EDUCATION

Harvard University2022	University of Minnesota2016 – 2018
A.B. in Sociology, secondary field in History of Science Dean's List (6x) · Rosenkrantz Discovery Grant	Transfer years; returned to Harvard to graduate Coursework in product design and business marketing education

SKILLS

Build: TypeScript, React, Astro, HTML/CSS, Python, FastAPI, Claude Code · **Design:** Figma, Framer, Adobe Creative Suite
Models & Audio: Web Audio API, Claude, Whisper, librosa, demucs, pedalboard · **Data:** SQL, dbt, Power BI, Alation

OUTSIDE WORK *Diary of a Soundbender*, a Substack on sound and design. Set the Minnesota all-time state record in the high hurdles and the University of Minnesota freshman 110m hurdles record; six-time state champion (110m and 300m hurdles, three years running).
